

Join the Future of Energy Investing

The Wildcat Pioneer Fund by EnergyFunders

Access exclusive, private market oil and gas drilling opportunities.

Get exposure to the hidden gems of the oil industry, offering venture capital-like upside.

Earn potentially lucrative tax deductions against your regular income (i.e. wages and salary).

Why Wildcatting?

Wildcat wells can offer some of the best returns you'll find in the oilfield.

These higher-risk prospects have been overlooked or left behind in potentially promising oil-bearing locations, often because of the elevated risk of development.

Our team of experts can help shift the odds in your favor, by minimizing risk and targeting prospects with enough upside to justify the downside.

Going Beyond Wildcatting

The upside from the Wildcat Pioneer Fund goes beyond finding "one-hit wonders." The right prospect in the right location can potentially uncover an entire opportunity set of future drilling locations.

The right Wildcat can turn a prospective field to proven reserves overnight. This can create a long runway of future upside, without taking Wildcat-style risk.

So, you're not just betting on single home runs. You're getting exposure to potential grand slams, with multiple pay-off opportunities.

A Venture Capital Approach to Energy

The risk/reward profile of Wildcatting looks a lot like venture capital investing, where a small number of big winners can potentially justify the elevated risks involved.

In venture capital, a total investment loss is a common feature – not a bug. But with enough upside, the small number of extreme winners can pay for these losing investments many times over.

Expert Vetting for Risk Reduction

We aim to control risk with our team of veteran geologists, engineers, and financial professionals.

Our due diligence process starts with a boots-on-the-ground assessment of both the prospect and the people - ensuring we only do business with operators who follow industry standards of best practices. We analyze each prospect for geological, operational and financial risk and compare against projected upside, to determine if the risk/return profile justifies an investment.

We also focus on sourcing projects from our network of trusted partners, who have a long track record of safe and successful oil and gas development.

EnergyFunders

Access to Exclusive Asset Class

In the past, oil and gas Wildcatting was an exclusive asset class. You had to “know someone who knew someone” to get into the club.

Now, EnergyFunders brings you easy access to this unique investment opportunity with the click of a button.

Meet the Team

The make-or-break factor when Wildcat prospecting is your people. Our team of industry veterans brings the skills and background for delivering you the best possible returns, while minimizing risk along the way.

Leading our team is CEO and Chief Geologist Laura Pommer. Laura has a master's degree in geology, and her working experience spans all major U.S. basins. This includes working in Anadarko's onshore exploration unit, where she screened every exploration deal proposed in both the Anadarko and Delaware basins from 2015 - 2017.

In 2018, Laura raised \$75M in private equity funding to start and lead Century Natural Resources. She obtained this private equity sponsorship based on her personal evaluation and mapping of a prospect in the Powder River Basin in Wyoming, and subsequent evaluation of both new opportunities and bolt-ons to their existing position.

Laura's background as geologist and CEO makes her the perfect fit for identifying high-potential exploration targets, while also focusing on minimizing operational and financial risk for investors.
